What Ledgerly Does

Ledgerly is an all-in-one business finance app. It replaces a spreadsheet-and-separate-tools setup with one place to track money in and out, send invoices, manage inventory, keep a client/vendor directory, run payroll, and see reports — with support for nine currencies and AI-generated insights on top of your live numbers.

Core modules

- **Bookkeeping** — log income and expense transactions with categories, tax amounts, and optional vendor tags. Filter the list by month and year.
- **Invoices** — build line-item invoices, pick a saved client to autofill their details, track status, filter by status, and download them as PDFs.
- **Clients & Vendors** — a saved directory of contacts you bill and contacts you pay, reused across invoices and expenses.
- **Inventory** — track stock levels, unit cost, and get low-stock warnings.
- **Payroll** — maintain an employee list and run payroll, which automatically logs the expense.
- **Reports** — Profit & Loss and Tax Summary statements for any date range.
- **Dashboard** — a live snapshot of revenue, expenses, cash flow, and invoicing health, with a per-chart time filter that remembers your last view.
- **Notifications** — a bell in the top bar that tracks meaningful changes: paid invoices, low stock, new team members, and payroll runs.
- **AI Insights** — a chat assistant (powered by Groq) that answers questions about your books.
- **Exports** — almost every list and report can be exported to CSV, XLSX, or PDF, with a native dialog to choose the file name and location. Your entire business can also be exported as one ZIP from Settings.

Supported currencies

USD, EUR, GBP, JMD, GHS, CAD, INR, AUD, and JPY. Each transaction, invoice, and employee record keeps whatever currency it was created in.

Signing In & Getting Around

Signing in

Ledgerly supports email/password sign-in as well as Google sign-in. Once signed in, you land on the Dashboard.

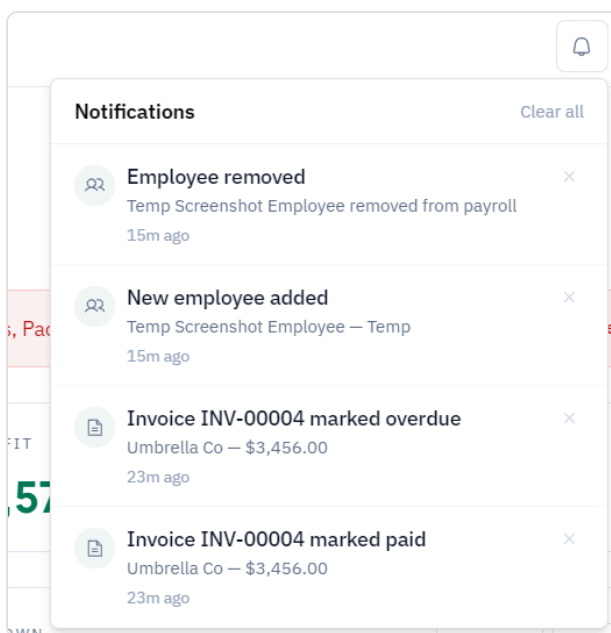

The sidebar

Every screen shares the same left-hand sidebar. From top to bottom:

- Your business name, with a chevron next to it — click it to open the **business switcher** if your account belongs to more than one business. Selecting a different one switches your whole workspace (dashboard, ledger, invoices, everything) to that business.
- The main sections: Dashboard, Bookkeeping, Invoices, Clients, Inventory, Payroll, Reports, and AI Insights.
- At the bottom: your account name/email, a link to Help, Settings, and Sign out.

The top bar

In the top-right of every page you'll find a bell icon and a Refresh button. The bell opens your recent notifications — things like an invoice being marked paid, an item running low, a payroll run completing, or a teammate joining. Unread notifications show a red count on the bell; opening the panel marks them read, and each one is clickable to jump straight to the relevant page. You can dismiss a single notification with its × or clear the whole list with Clear all.

The notification panel, opened from the bell icon.

Consistent page pattern

Almost every page follows the same layout: a small category label (e.g. "BOOKKEEPING"), a large page title, a one-line description underneath, and a Refresh button in the top-right corner to pull the latest data.

Appearance

Ledgerly isn't locked to one look. Under Settings → Appearance you can pick from nine built-in themes — Light, Dark, Ocean, Grey, Sage, Amber, Violet, Indigo, and Rose — or choose Custom to set your own background and accent color. The change applies immediately across the whole app. See Section 12 for details.

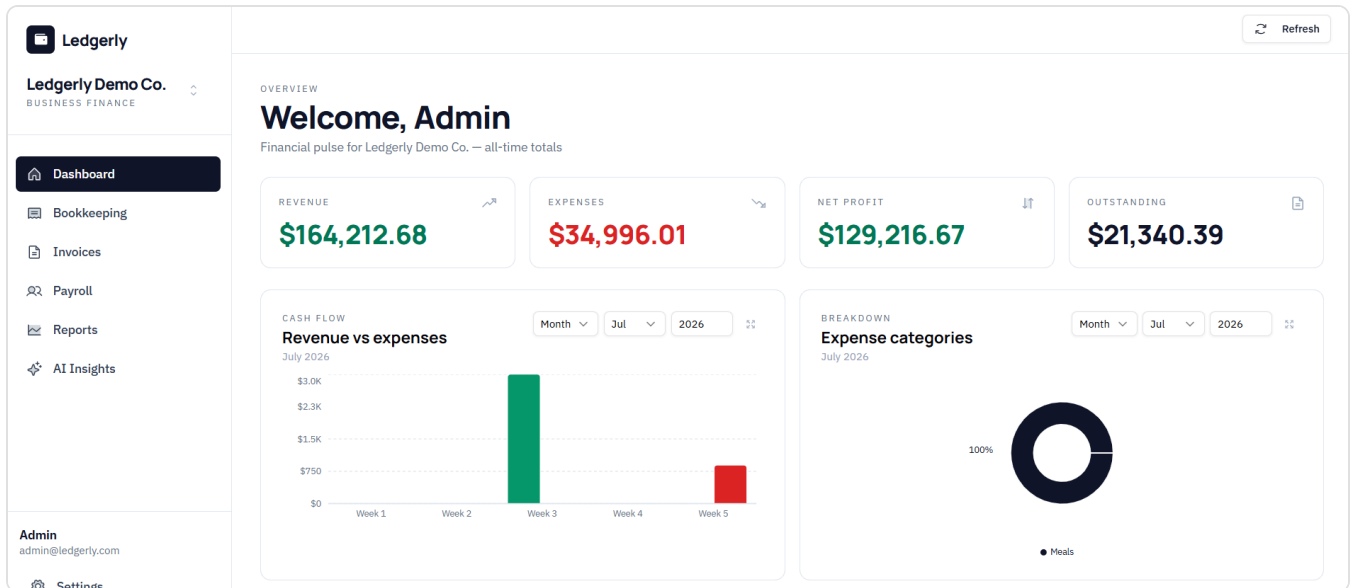

Dashboard

The Dashboard is your financial pulse at a glance, using all-time totals unless a card has its own date filter. It's built from several cards:

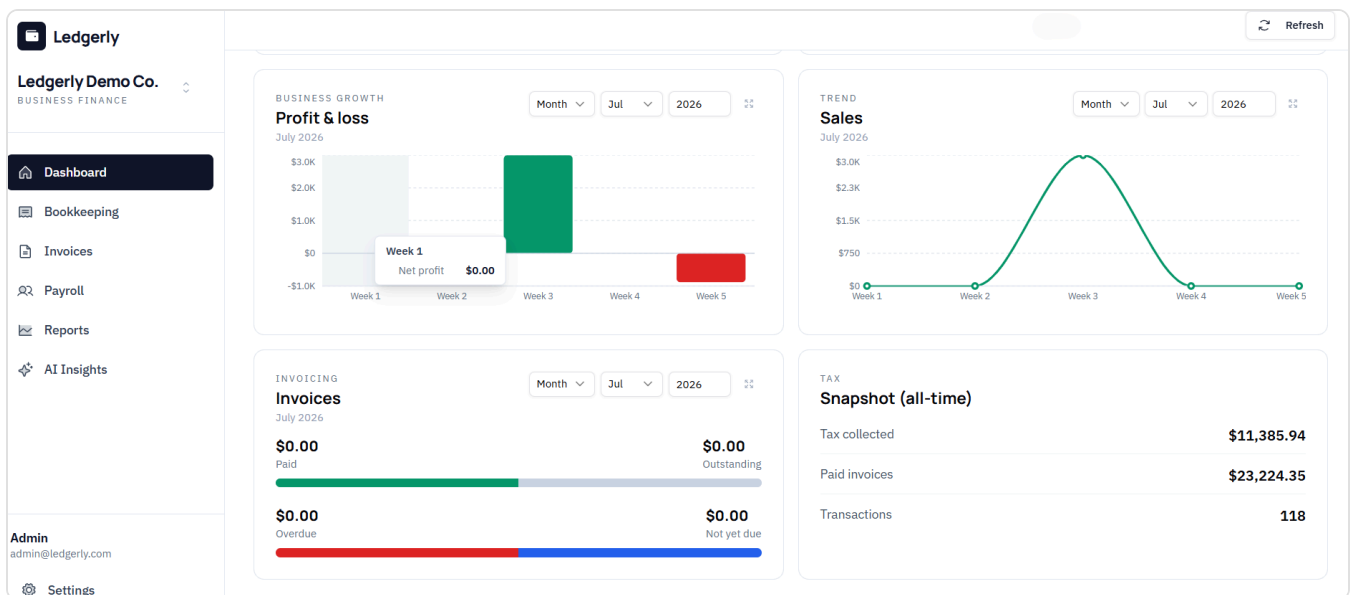

Field	What it means
Revenue / Expenses / Net Profit	Three headline numbers at the top, each with a trend arrow icon.
Outstanding	Total value of unpaid invoices, shown with a document icon.
Cash Flow — Revenue vs Expenses	A bar chart comparing income and spending, filterable by day, week, month, or year.
Breakdown — Expense Categories	A donut chart showing what share of spending went to each category for the selected period.
Business Growth — Profit & Loss	A bar chart of net profit; hover a bar to see its exact figure in a tooltip.
Trend — Sales	A line chart of sales across the selected period.
Invoicing	Two progress bars: Paid vs Outstanding, and Overdue vs Not Yet Due, for the selected period.
Tax Snapshot (all-time)	Tax collected, paid invoices total, and total transaction count, all-time.
Live Exchange Rates	Reference rates (1 USD = ...) for all nine supported currencies, refreshed on demand. Informational only — not used in any totals.

TIP

Each chart card has its own Day / Week / Month / Year selector (with an exact-date, week, month, or year picker to match) in the top-right, so you can compare different periods without leaving the Dashboard. Your choice for each chart is remembered — come back later and it'll still show what you were last looking at, instead of resetting. Click the expand icon on any chart to view it larger.

The Dashboard — revenue, expenses, net profit, cash flow, and expense breakdown.

Scrolled down: profit & loss trend, sales trend, invoicing progress, and the tax snapshot.

If any inventory items are running low, a red banner appears near the top of the Dashboard with a "View inventory →" link straight to the Inventory page.

Bookkeeping (Transactions)

This is your day-to-day ledger of money in and out. The Transactions table lists every entry with Date, Type (Income or Expense), Category, Description, Tax, and Amount — income shows in green with a plus sign, expenses in red with a minus sign.

The Transactions list in Bookkeeping.

Filtering the list

Two dropdowns above the table — Month and Year — narrow the list down to a specific period. Both default to "all," showing your full history.

Adding a transaction

Click **+ New transaction** in the top-right. The dialog asks for:

Field	What it means
Type	Income or Expense.
Date	Defaults to today.
Amount	The transaction value.
Currency	Any of the nine supported currencies (defaults to USD).
Category	e.g. Sales, Services, Interest, Refunds, Other Income for income; Software, Marketing, Supplies, Utilities, Taxes, Meals, Professional Fees, Other Expense for expenses. You can also add your own custom category.

Field	What it means
Vendor	Expenses only — optionally pick a saved vendor from your Clients & Vendors directory to tag who the money went to. If the description is empty, picking a vendor fills it in with the vendor's name. If you haven't saved any vendors yet, you'll see a prompt linking to the Clients page instead.
Tax amount	Optional tax associated with the transaction.
Description	Free text notes.

Click **Add** to save it to the ledger.

Description

Add

The New Transaction dialog.

The image shows a 'New transaction' dialog box with a close button (X) in the top right corner. It contains several input fields: 'Type' (set to 'Expense'), 'Date' (set to '07/12/2026' with a calendar icon), 'Amount' (empty), 'Currency' (set to 'USD'), 'Category' (empty), and 'Vendor' (set to 'None'). The 'Vendor' dropdown menu is open, showing a list of options: 'None' (which is highlighted with a checkmark), 'Google Cloud', 'Meta Ads', 'Office Depot', and 'WeWork'. A 'Add' button is visible at the bottom right of the dropdown list.

The Vendor picker, shown for an Expense transaction.

Managing entries

Each row has a menu icon (three dots) on the right for row-level actions.

Exporting

Click **Export** in the top-right for a dropdown with three formats: Export CSV, Export XLSX, and Export PDF. See Section 10, Exporting Your Data, for how the download itself works.

Invoices

The Invoices list shows Invoice #, Client, Issued and Due dates, Status, and Total. Status is color-coded: Draft (gray), Sent (blue), Overdue (red), and Paid (green).

INV-00011	Ironwood Partners	10-26-2024	10-31-2024	PAID	\$1,246.88

The Invoices list, with color-coded statuses.

Filtering by status

A row of clickable status pills — Draft, Sent, Paid, Overdue — sits above the list. Click one or more to show only invoices in those statuses; click again to remove the filter. With none selected, every invoice shows.

Creating an invoice

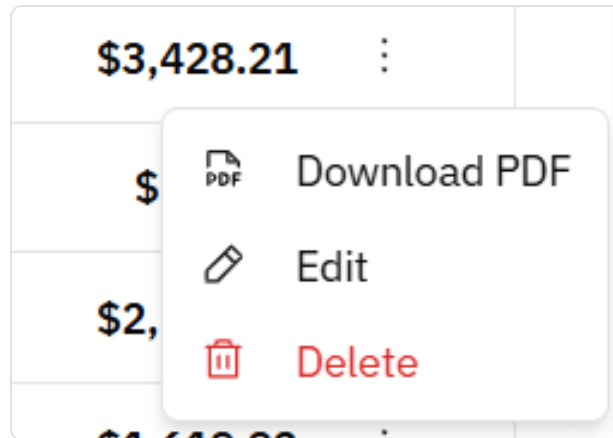

Click **+ New invoice**. If you have any saved clients, a Client directory picker appears at the top of the form — choosing one autofills the name, email, and address below, which you can still edit. Otherwise, or for a one-off client, just fill the fields in manually.

Field	What it means
Client name / email / address	Who the invoice is billed to.
Issue date / Due date	Default to today and two weeks out.
Currency	Any of the nine supported currencies.
Line items	Description, Qty, and Unit Price per line; use + Add line for more rows. A line item can optionally be linked to an inventory item, so marking the invoice sent/paid/overdue automatically deducts that quantity from stock. Subtotal is calculated automatically.
Tax rate (%)	Applied across the invoice subtotal.
Status	Draft, Sent, Paid, or Overdue.
Notes	Optional free text shown on the invoice.

The New Invoice form, with the Client directory picker at the top.

Working with an existing invoice

Open the row's menu (three dots) on any invoice row for three actions: Download PDF (a client-ready PDF of that invoice), Edit, and Delete.

The row menu on an invoice.

TIP

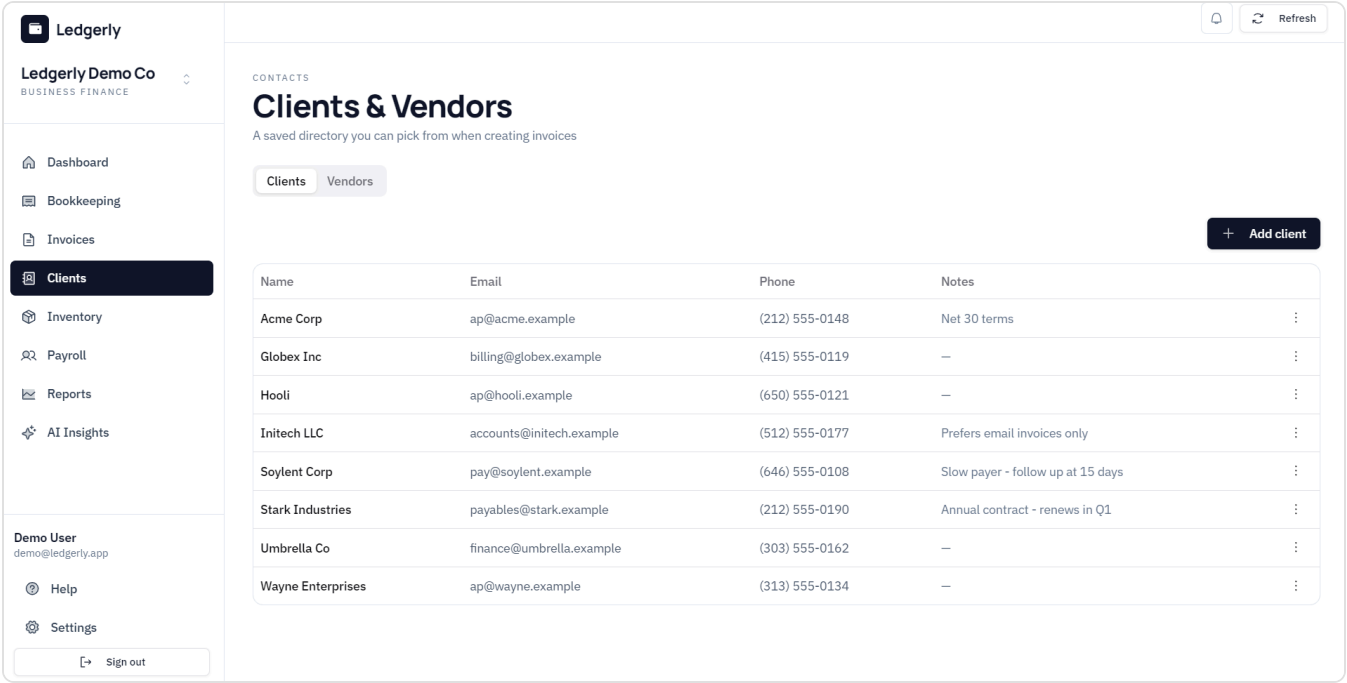

Marking an invoice Paid automatically logs a matching income transaction in Bookkeeping, linked back to that invoice, so your Revenue and Reports actually reflect money you've been paid — no need to log it twice. If you change the status away from Paid again (say, a correction), that transaction is removed, since the money isn't actually there. Editing a still-paid invoice's total keeps the linked transaction's amount in sync automatically.

Exporting the list

The Export button (top-right, next to New invoice) offers the same three formats: CSV, XLSX, and PDF.

Clients & Vendors

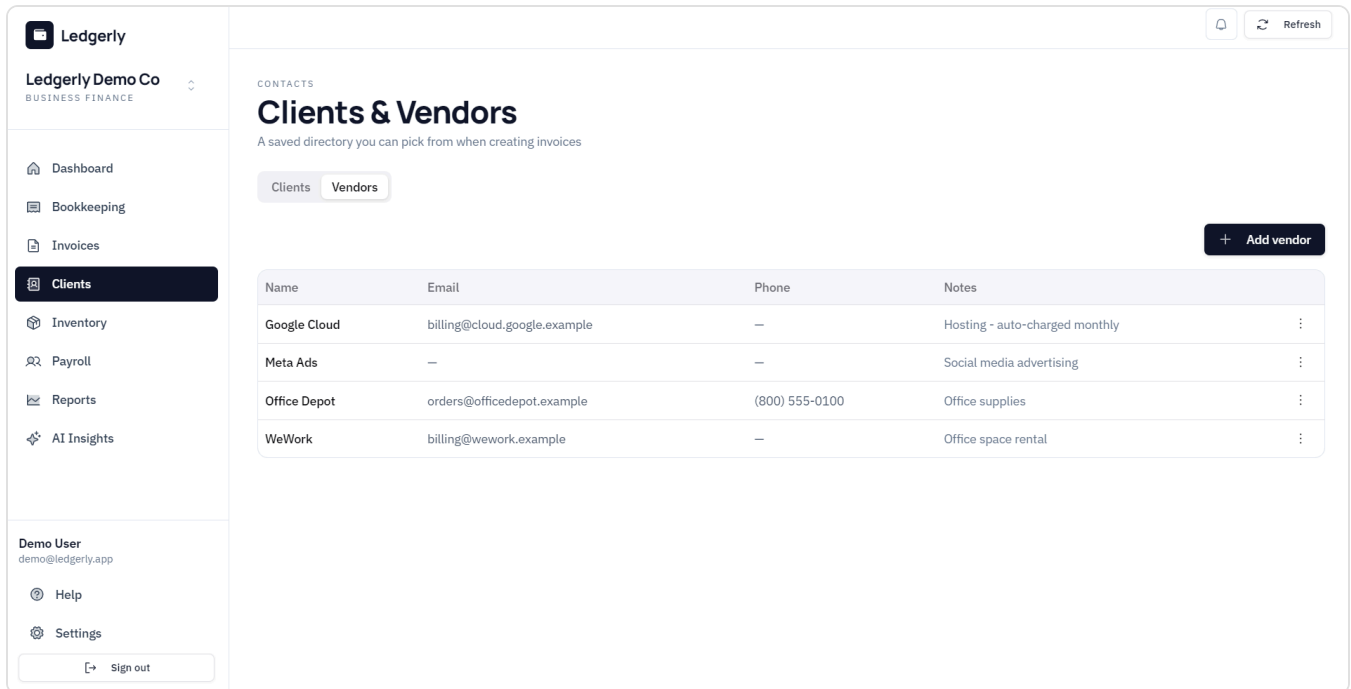

Clients & Vendors is a saved directory of the people and businesses you deal with, so you don't have to retype the same details every time you create an invoice or log an expense. It's split into two tabs.

The Clients tab.

Clients tab

Everyone you bill. Click **+ Add client** to save a Name, Email, Phone, Address, and Notes. Saved clients show up in the Client directory picker when you create a new invoice (see Section 5) — selecting one autofills the invoice's client details.

The Vendors tab.

Vendors tab

Everyone you pay — suppliers, software subscriptions, landlords, and so on. Click **+ Add vendor** to save the same set of details. Saved vendors show up in the Vendor picker when you log an expense transaction (see Section 4), letting you tag which vendor the money went to.

New contact

Name

Email Phone

Address

Optional

Notes

Optional

Add

The New contact dialog, shared by both tabs.

Managing a contact

Open a row's menu (three dots) to Edit or Remove a client or vendor. Removing a contact only removes it from the directory — any invoices or transactions that already reference it are unaffected.

Inventory

Inventory tracks the physical stock your business holds — merch, supplies, equipment, and more — so you always know what's on hand, what it's worth, and when to reorder.

Field	What it means
Items tracked	The number of distinct inventory items on file.
Inventory value	Total value of everything in stock: each item's quantity multiplied by its unit cost, summed together.
Running low	Count of items at or below their low-stock threshold.

TIP

Whenever one or more items fall at or below their threshold, a red banner lists them by name at the top of the page — and the same alert also surfaces on the Dashboard with a link straight back here.

Click Export in the top-right for the same CSV, XLSX, and PDF options as everywhere else, listing every item's category, stock, unit cost, and total value.

Payroll

Payroll has two tabs: Employees and Payroll runs.

Employees tab

Click + **Add employee** to open the New Employee form:

Field	What it means
Name	Employee's full name.
Email	Optional contact email.
Position	Job title.
Salary	Pay amount per period.
Tax rate (%)	Withholding rate applied when payroll runs.
Currency	Any of the nine supported currencies.
Pay frequency	e.g. Monthly.

The screenshot shows a modal window titled "New employee" with a close button (X) in the top right corner. The form contains the following fields: "Name" (a single-line text input), "Email" (a single-line text input), "Position" (a single-line text input), "Salary" (a single-line text input), "Tax rate (%)" (a single-line text input with "0" entered), "Currency" (a dropdown menu with "USD" selected), and "Pay frequency" (a dropdown menu with "Monthly" selected). An "Add" button is located at the bottom right of the form.

The New Employee form.

The Employees table lists Name, Position, Frequency, Salary, and Tax % for everyone on file.

The Employees tab in Payroll.

Payroll runs tab

This is where you actually run payroll and see history. A Run payroll button processes the current employee list — each run calculates gross pay, tax, and net pay per employee (a payslip) and automatically logs the total as an expense in Bookkeeping, so your books stay in sync without double entry.

Completed runs appear in a table with Period, Employees, Gross, Tax, and Net. Three export buttons sit above the table: CSV, XLSX, and PDF, for payroll run history and payslips.

The Reports page — Profit & Loss and Tax Summary.

Exporting Your Data

Ledgerly lets you get your data out in three formats almost everywhere: CSV (for spreadsheets or importing elsewhere), XLSX (a formatted Excel workbook), and PDF (a client- or record-ready document). Look for an Export button (sometimes a dropdown, sometimes three separate buttons) in the top-right of these screens:

- **Bookkeeping** — export the full transaction ledger, including any tagged vendor.
- **Invoices** — export the invoice list, or download a single invoice as PDF from its row menu.
- **Inventory** — export the full stock list.
- **Payroll runs** — export payroll history and payslips.
- **Reports** — export the Profit & Loss statement or the Tax Summary independently.

Exporting everything at once

For a full backup rather than one list at a time, go to **Settings** → **Data & Account** → **Export my data**. It downloads a single ZIP containing every transaction, invoice, client, inventory item, employee, and payslip in your business as CSV files.

Choosing where files go

Clicking any Export option opens a native Save dialog, defaulting to your Downloads folder with a suggested file name — you can rename the file or pick a different folder right there before saving. While the file is being prepared you'll see a "Downloading..." notification, which updates to "Downloaded" with an Open button once it's ready, so you can jump straight to the file without hunting for it.

TIP

Your business logo (set in Settings → Business) appears automatically on PDF exports — invoices, reports, and more — once you've uploaded one.

AI Insights

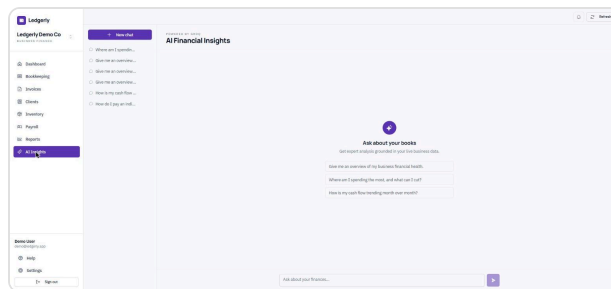

AI Insights is a chat assistant, powered by Groq, that answers questions grounded in your live business data. Start a conversation with + New chat, or use one of the suggested prompts:

- “Give me an overview of my business financial health.”
- “Where am I spending the most, and what can I cut?”
- “How is my cash flow trending month over month?”

You can also type your own question in the message box at the bottom of the page. Past conversations are saved in the left-hand list.

Usage limits

AI Insights works out of the box on a small shared daily quota. For unlimited use, add your own free Groq API key under Settings → Business → AI Insights (get a key at console.groq.com/keys). Usage then bills to that key's account, not Ledgerly.

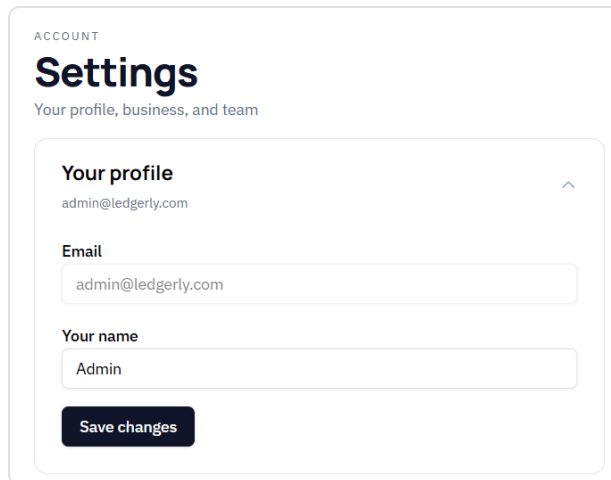

AI Insights, now powered by Groq.

Settings, Business & Team

Settings is organized into tabs across the top: **Profile**, **Business**, **Team** (owner/admin only), **Appearance**, **Data & Account**, and — in the desktop app only — **Check for Updates**.

Profile

Update your account Email and Name, then click Save changes.

The screenshot shows the 'Settings' window with the 'ACCOUNT' tab selected. The title 'Settings' is prominently displayed, followed by the subtitle 'Your profile, business, and team'. Below this, a section titled 'Your profile' contains the email address 'admin@ledgerly.com'. Underneath, there are two input fields: 'Email' (containing 'admin@ledgerly.com') and 'Your name' (containing 'Admin'). A dark blue 'Save changes' button is located at the bottom of the form.

The Profile tab in Settings.

Business

Field	What it means
Logo	Upload a PNG, JPEG, or WEBP up to 1MB. It appears on your PDF exports (invoices, reports, and more).
Business name	Shown across the app and on exported documents.
Primary currency	Your business's default currency.
Relabel existing records	A one-click action to relabel all existing transactions, invoices, employees, and payslips to your current primary currency. Important: this only changes the currency label shown, it does not convert the amounts.
AI Insights key	Field to add your own Groq API key for unlimited AI Insights usage.

Business

Ledgerly Demo Co.

Shown on your PDF exports (invoices, reports, and more).

 Upload logo

Business name

Ledgerly Demo Co.

Primary currency

USD — US Dollar

Save changes

EXISTING RECORDS

Transactions, invoices, employees, and payslips each keep the currency they were created with. If you only ever use one currency, you can relabel all of them to match your current setting (USD) — this only changes the currency shown, it does not convert amounts.

Relabel existing records to USD

AI INSIGHTS

Powers the AI Insights page. Works out of the box on a small shared daily quota. For unlimited use, add your own free Gemini API key (from aistudio.google.com/apikey) — usage then bills to that account, not Ledgerly.

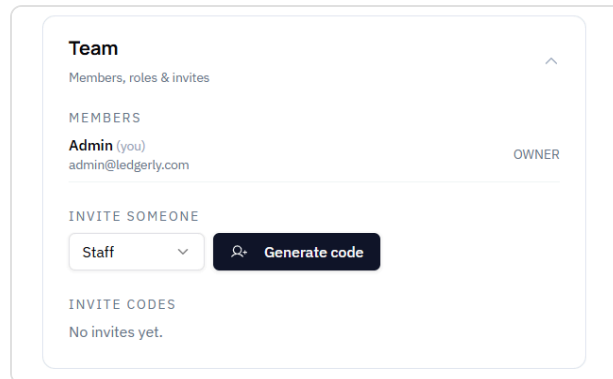

Your Gemini API key

Save

The Business tab in Settings.

Team

Shows current members and their role (e.g. Owner). To add someone, choose a role from the dropdown (e.g. Staff) and click Generate code to create an invite code; generated codes are listed under Invite Codes.

The Team tab in Settings.

Appearance

Pick from nine built-in themes — Light, Dark, Ocean, Grey, Sage, Amber, Violet, Indigo, Rose — or choose Custom to set your own background and accent color with color pickers. The change applies immediately.

Data & Account

Two things live here, kept deliberately separate:

- **Export my data** — downloads a ZIP of every transaction, invoice, client, inventory item, employee, and payslip in your business as CSV files. Good for a full backup or moving your data elsewhere.
- **Delete my account** (Danger zone) — permanently deletes your account. This can't be undone. If you're the *sole* member of a business, deleting your account deletes that business's data too. If you own a business that still has other members, you'll be blocked and asked to transfer ownership or remove the other members first — so nobody else silently loses access to shared data. Password-based accounts need to confirm their password before the button unlocks.

Check for Updates (desktop app only)

Shows your currently installed version number and a Check for Updates button to manually check for a newer release, in addition to the automatic check the app does on its own.

Multi-Currency Support

Ledgerly supports nine currencies: USD, EUR, GBP, JMD, GHS, CAD, INR, AUD, and JPY. Currency is chosen per record — each transaction, invoice, and employee keeps whatever currency it was created with, even if you later change your business's primary currency in Settings.

The Dashboard's Live Exchange Rates card shows current reference rates against USD, but these are informational only and are not applied to convert amounts anywhere in the app. If you want every record to display the same currency label, use Relabel existing records in Settings → Business — remembering that it changes the label only, not the underlying amount.

Quick Reference & Tips

Where to find things

Field	What it means
Add money in/out	Bookkeeping → + New transaction
Filter transactions by period	Bookkeeping → Month / Year dropdowns
Tag an expense to a vendor	Bookkeeping → New transaction → Expense → Vendor
Bill a client	Invoices → + New invoice
Filter invoices by status	Invoices → status pills above the list
Download a single invoice PDF	Invoices → row menu (three dots) → Download PDF
Save a client or vendor	Clients → Add client / Add vendor
Add or restock an inventory item	Inventory → + Add item (or the -/+ steppers on a row)
Add a team member to payroll	Payroll → Employees tab → + Add employee
Run payroll for the period	Payroll → Payroll runs tab → Run payroll
See profit for a date range	Reports → set From/To → Run reports
Export anything to CSV/XLSX/PDF	Look for the Export button in the top-right of that page
Export your whole business as a ZIP	Settings → Data & Account → Export my data
Check recent activity & alerts	Click the bell icon, top-right, next to Refresh
Ask a question about your finances	AI Insights → + New chat
Change your business currency label	Settings → Business → Relabel existing records
Add your own AI key	Settings → Business → AI Insights
Invite a teammate	Settings → Team → Generate code
Switch between businesses	Sidebar → click your business name
Change the app's theme	Settings → Appearance
Delete your account	Settings → Data & Account → Danger zone

Good habits

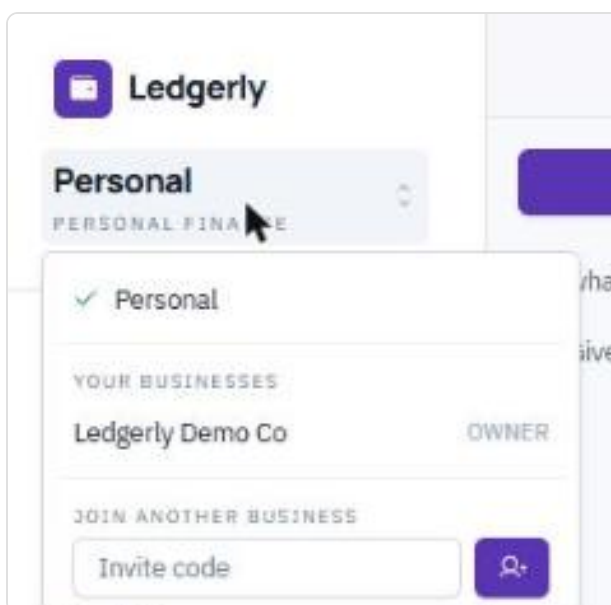

- Log transactions as they happen rather than batching them — the Dashboard and Reports are only as current as your ledger.
- Use consistent categories so your Reports and Dashboard charts stay meaningful.
- Set an invoice's Status as it changes (Sent → Paid, or Overdue) — it drives the Dashboard's invoicing progress bars, and Paid also logs the income automatically.
- Run payroll from the Payroll runs tab rather than logging salary as a manual transaction — it keeps payslips and the expense ledger in sync automatically.
- Set a sensible low-stock threshold on each inventory item so the Inventory page (and the Dashboard) warns you before you actually run out.
- Keep your Clients & Vendors directory up to date — it saves retyping and keeps invoices and expenses consistent.
- Upload your business logo early; it will carry through to every PDF export from then on.
- If you're the sole owner of a business, think twice before Delete my account — there's no undo, and it takes the business's data with it.

Personal Finances

Every Ledgerly account has two sides: **Business** — your company's books, invoices, payroll, and team — and **Personal** — your own income, spending, budgets, bills, and savings goals. They're kept completely separate (no shared team, no shared numbers), but live under the same login, so you can switch between them in a couple of clicks.

Switching to Personal

Click your workspace name at the top of the sidebar (it shows either your business name or "Personal") to open the workspace switcher. It lists **Personal** at the top, followed by every business you belong to under "Your Businesses." Pick either one to switch your entire workspace — sidebar, dashboard, and every page — to that context.

The workspace switcher, open on the Personal side.

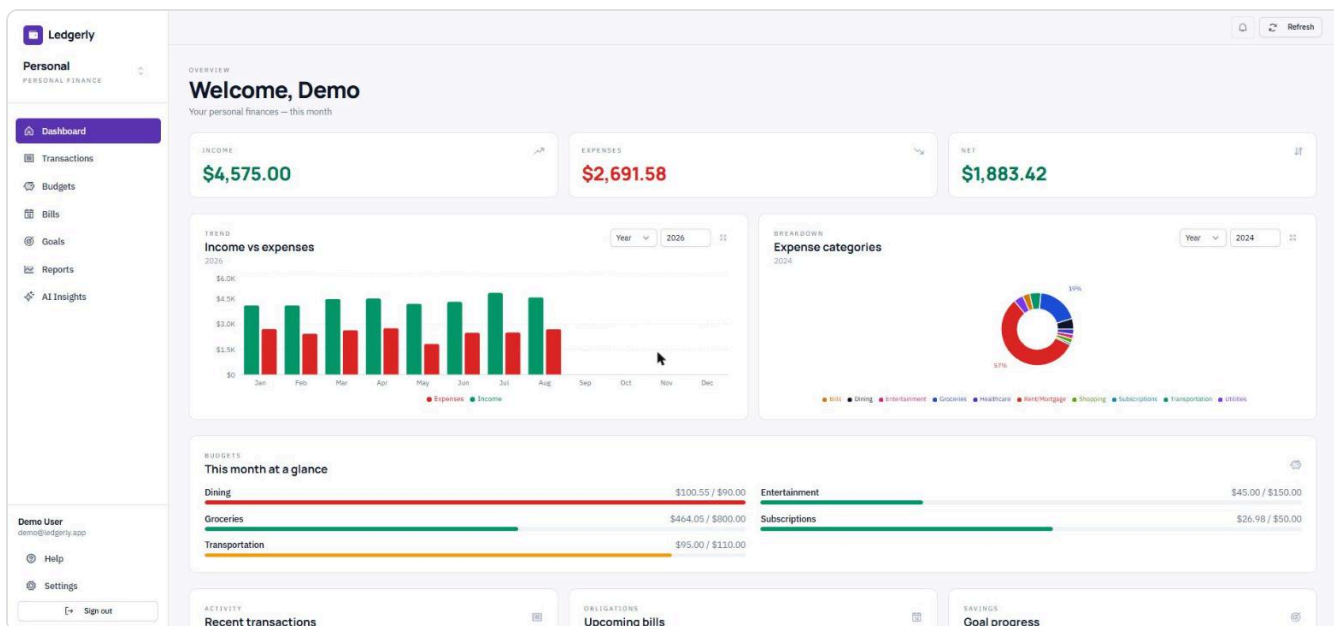

TIP

The same switcher is also how you join or move between multiple businesses (see Section 2) — Personal is just one more option in the same list, always available regardless of how many businesses you're part of.

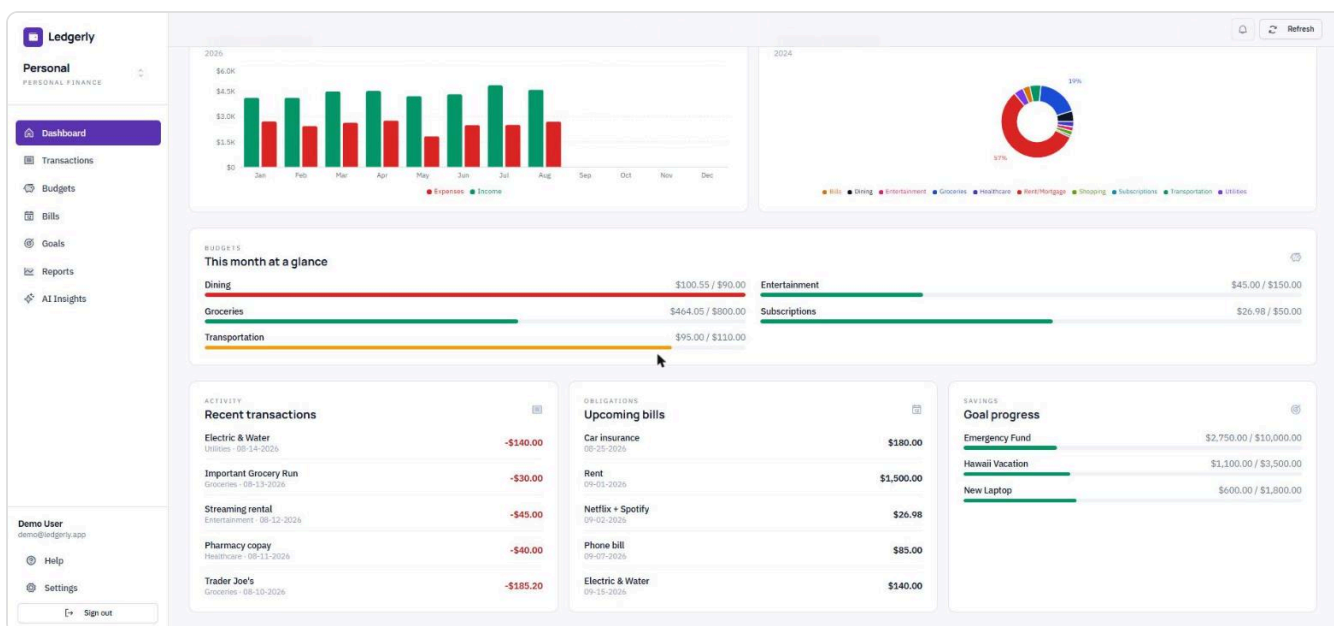

Personal Dashboard

Once on the Personal side, the sidebar switches to a shorter set of sections built for one person's finances: Dashboard, Transactions, Budgets, Bills, Goals, Reports, and AI Insights. The Dashboard gives you this month's snapshot in one screen:

Field	What it means
Income / Expenses / Net	Three headline numbers for the current month.
Income vs Expenses	A bar chart comparing the two across the year, filterable by day, week, month, or year like the Business dashboard.
Expense Categories	A donut chart of where your spending went for the selected period.
Budgets — This month at a glance	A compact progress bar per budget, color-coded green (on track), amber (near the limit), or red (over) — the same set you'll see in full on the Budgets page.
Recent transactions	Your last few personal transactions.
Upcoming bills	Bills coming due soonest.
Goal progress	A progress bar per savings goal.

The Personal Dashboard – income, expenses, trend, and this month's budgets.

Scrolled down: recent transactions, upcoming bills, and goal progress.

Personal Transactions, Budgets, Bills & Goals

Transactions

Your personal ledger works just like Bookkeeping on the Business side (Section 4), minus the vendor tagging and multi-currency fields — it's just Type, Date, Category, Description, and Amount. Filter by Month and Year, and click + **New transaction** to log income or an expense.

08-02-2026	EXPENSE	Subscriptions	Netflix + Spotify	-\$26.98

The Transactions list on the Personal side.

Budgets

Set a monthly spending limit per category from **+ New budget**. Each budget shows as a card with an animated progress bar — green while comfortably under, amber as you approach the limit, and red once you've gone over.

Budgets — Dining is over, Transportation is near its limit, the rest are on track.

TIP

Click any budget card to drill down into exactly which transactions counted toward it this month — no need to go hunting through the full Transactions list.

Clicking a budget card shows the transactions behind it.

Bills

A simple list of recurring and one-off bills with a due date, category, and amount. Click **Mark paid** on a row once it's settled, or use the row's menu (three dots) for more actions. Bills due soon are called out so nothing slips through.

The screenshot shows the 'Bills' section of the Ledgerly app. The left sidebar contains navigation options: Dashboard, Transactions, Budgets, Bills (selected), Goals, Reports, and AI Insights. The main area is titled 'Bills' with a subtitle 'Upcoming and recurring bills' and a '+ New bill' button. It contains a table with the following data:

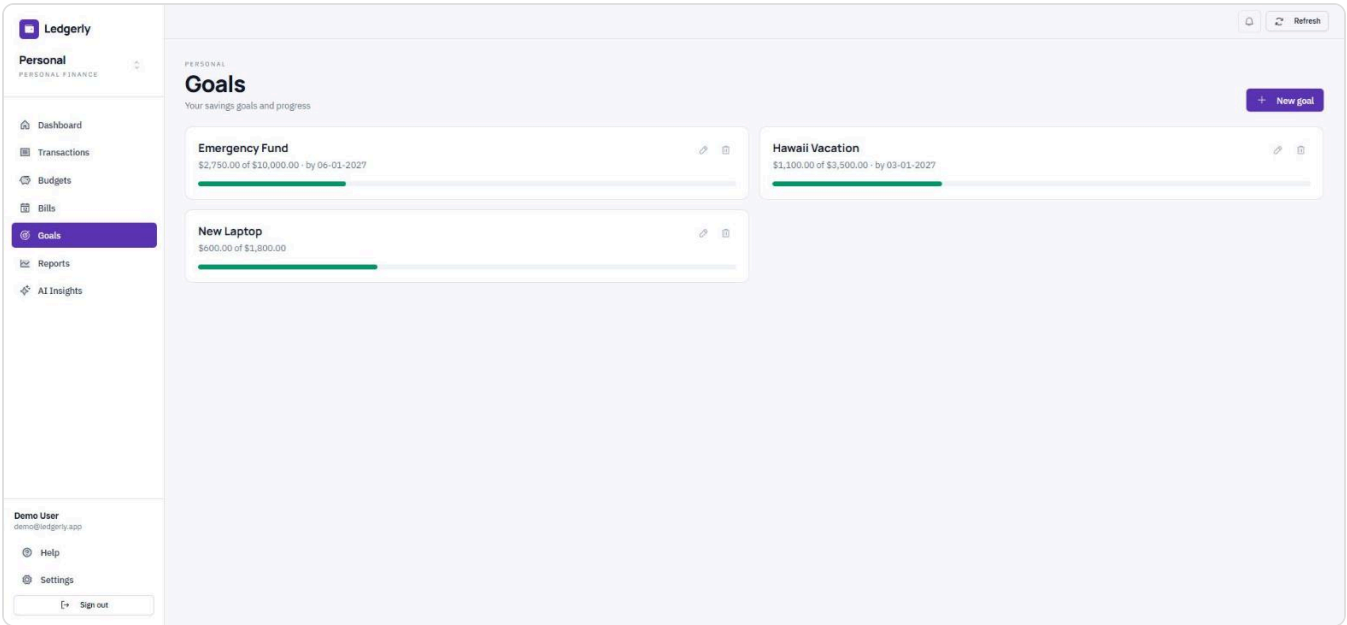

Bill	Category	Due	Amount	
Car insurance	Bills	08-25-2026	\$180.00	☒ Mark paid ⋮
Rent	Rent/Mortgage	09-01-2026	\$1,500.00	☒ Mark paid ⋮
Netflix + Spotify	Subscriptions	09-02-2026	\$26.98	☒ Mark paid ⋮
Phone bill	Bills	09-07-2026	\$85.00	☒ Mark paid ⋮
Electric & Water	Utilities	09-15-2026	\$140.00	☒ Mark paid ⋮

At the bottom left, there is a 'Demo User' section with links for Help, Settings, and a Sign out button.

The Bills list.

Goals

Set a savings target — an emergency fund, a vacation, a big purchase — with an optional target date, then log contributions toward it over time. Each goal shows as a card with a progress bar toward its target; reach 100% and Ledgerly celebrates with a burst of confetti.

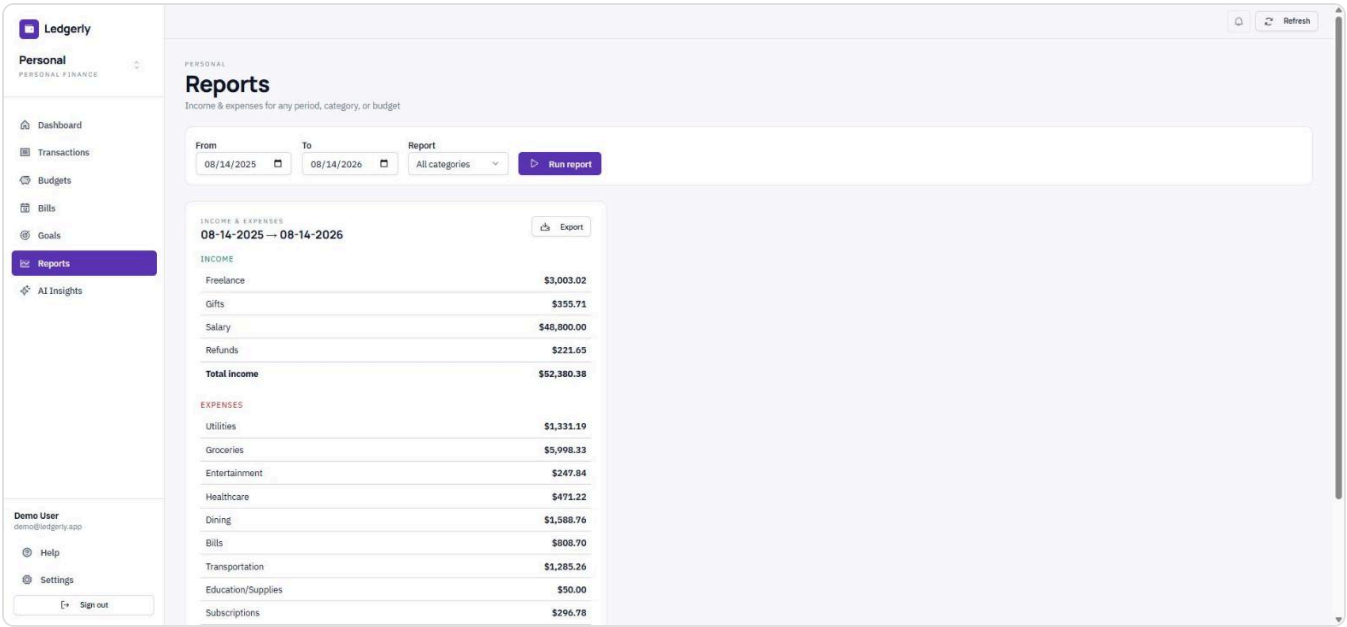

Goals — Emergency Fund, Hawaii Vacation, and New Laptop, each with contribution progress.

Personal Reports & AI Insights

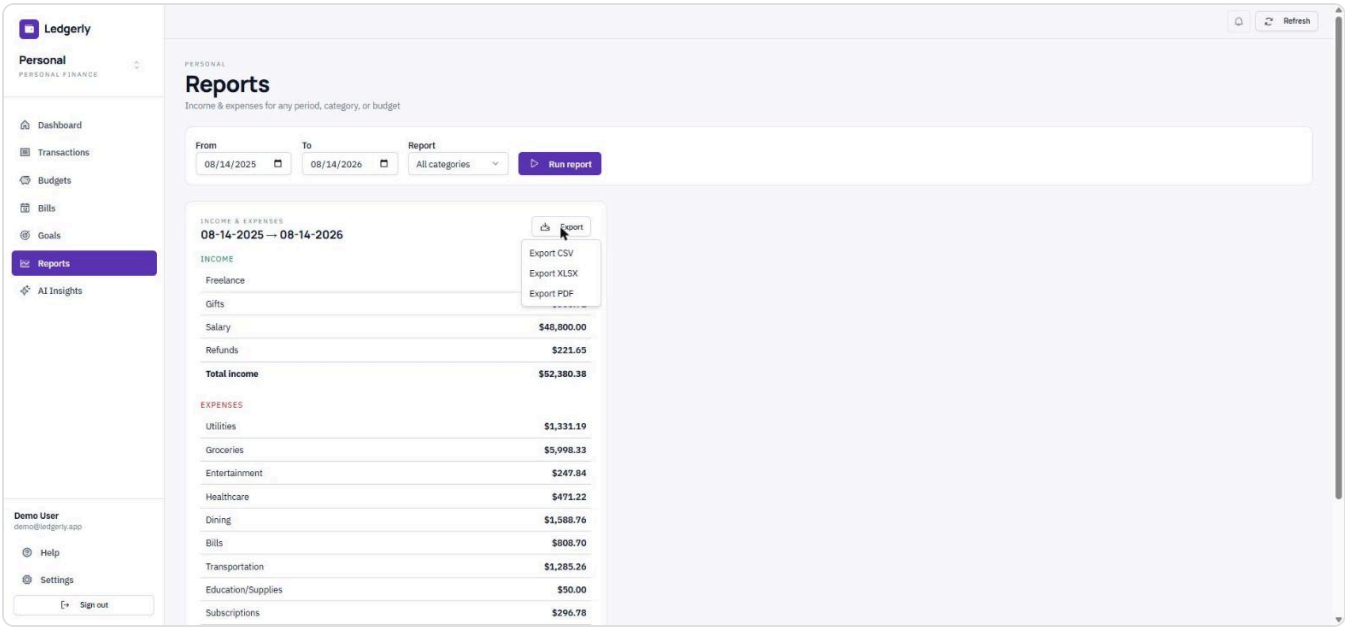

Reports

Set a From/To date range and an optional category filter, then click **Run report** for an income-and-expenses breakdown over that period — total income by category, total expenses by category, and the net for the range.

A Personal income & expenses report.

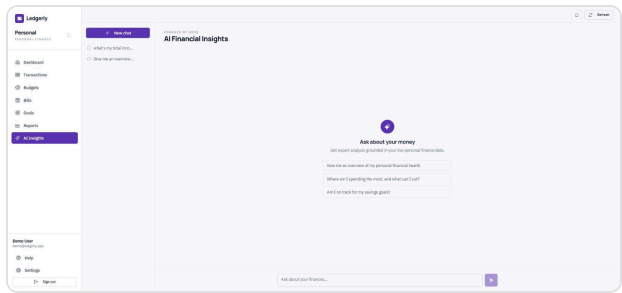

Click **Export** for the same CSV, XLSX, and PDF choices as everywhere else — each one opens a native Save dialog with a suggested file name that you can rename or redirect before saving, exactly as described in Section 10.

The Export menu on a Personal report.

AI Insights

The same Groq-powered chat assistant as the Business side (Section 11), scoped to your personal transactions, budgets, and goals instead. Start with **+ New chat** or one of the suggested prompts, and it shares the same daily quota and Groq-key setup described in Section 11.

AI Insights, scoped to your personal finances.

LEDGERLY

That's the full tour.

Stuck on something not covered here? Click Help in the sidebar from anywhere in the app, or just ask AI Insights — it's grounded in your real, live data. For downloads, release notes, and an FAQ, see the project page below.
